

Statistics on non-performing loans (NPLs)

Q3 2024

The quality of credit in the resident private sector remains solid, with a NPL ratio of 3.4%.

In both household and business credit, doubtful loans declined, although the NPL ratios remain at the same level as in Q2 2024.

Doubtful exposures in the housing purchase portfolio have shown particularly favorable performance, with the NPL ratio improving from 2.5% to 2.4%.

The NPL ratio for home renovation credit has increased by 0.1 pps on a quarterly basis

The credit quality in the **private sector resident** remains under control despite the unprecedented rise in financial costs amid the monetary tightening process. During this period, the Non-Performing Loan (NPL) ratio increased marginally by 0.1 percentage points (pps) to 3.6% in the first quarter of 2024, subsequently, declining by 0.2 pps to **3.4%**.

Across credit segments, both household and companies experienced reductions in the volume of non-performing assets on a quarterly and annual basis. However, in quarterly terms, this improvement was insufficient to offset the negative trend in the outstanding balance of both portfolios. As a result, the NPL ratio for both segments remained unchanged from the second quarter of 2024, standing at **3.0% for household credit** and **4.0% for credit to productive activities**. Nevertheless, both indicators are at their lower levels in the past 15 years.

In the household segment, non-performing loans linked to **residential mortgage credit** showed particularly favorable performance this quarter, with a 3% reduction compared to the previous quarter and a 6% decline year-on-year. The NPL ratio for this segment dropped from 2.5% to **2.4%** over the last 3 months, just 0.1 pps above the minimum reached at the end of 2022. Due to its nature, this type of credit exhibits the lowest NPL levels in the aggregate portfolio.

By contrast, non-performing **loans for home renovation** experienced a slight quarter-on-quarter increase of less than 1%. This rise, combined with a contraction in the outstanding balance, led to an increase in the NPL ratio from 3.5% in the second quarter of 2024 to **3.6%**.

Doubtful assets in the real estate sector have shown positive evolution both quarterly and year-on-year, reaching a NPL ratio of 2.5%. In contrast, the construction sector has recorded an annual increase in its NPL ratio, which currently stands at 8.1%.

Regarding exposures related to real estate and construction credit, the performance has been relatively uneven. On the one hand, **real estate activities** have continued to show a favorable path in the doubtful loan cleansing, with non-performing assets dropping to just **2.5%**. This figure corresponds to approximately EUR 1.8 billion, a significant reduction from the EUR 80.0 billion recorded more than a decade ago. On the other hand, while the **construction sector** showed positive quarterly progress, these improvements were not reflected on an annual basis due to the increase in non-performing loans observed at the end of 2023 and the beginning of 2024. Consequently, in the third quarter of 2024, the NPL ratio improved from 8.4% in the second quarter of 2024 to **8.1%**, though it remains 0.3 pps higher than the ratio recorded a year ago.

Looking ahead, the outlook is reasonably favorable. Factors such as the sale of non-performing loan portfolios, a strong labor market, and an optimal finance environment are expected to help maintain a low cost of risk. This positive scenario will enable financial
